

## House Dust Mite Allergen Test Kit

Detection within 10 minutes | Simultaneous detection of 2 groups of dust mite allergen | Dot type strip for easy analysis

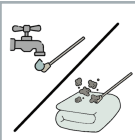

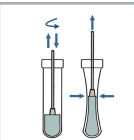

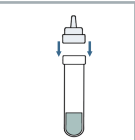

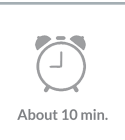

Please read the manual carefully before using this test kit.

BAROS-M House Dust Mite Allergen Detection Kit detects major house dust mite allergens(Der f1, p1 / Der f2, p2) that can cause allergies in places where dust mites are expected to exist, such as beds, blankets, sofas and carpets. This detection kit can detect both European and American house dust mite allergens, and it has excellent detection sensitivity by using a specific antibody. In addition, results can be checked within 10 minutes and can be easily determined.

### Product Package

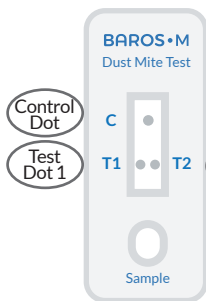

### BAROS-M User Guide

				
<b>1</b> After wetting a swab with water, collect dust by rubbing the detection area with the swab.	<b>2</b> After stirring the swab more than 10 times, remove the swab while squeezing the sides of tube.	<b>3</b> Press the nozzle filter cap tightly onto the tube.	<b>4</b> Apply 3~4 drops of extracted sample to the sample well of the test cassette.	<b>5</b> Read the test result in 10 minutes.

### Interpretation of test result

BAROS-M detects allergens of house dust mite using three dots.  
Test dot 1 and Test dot 2 mean house dust mite allergen groups 1 and 2.

**Low Positive**

**When test point is weakly colored**

There are house dust mite allergens that can cause allergies. It is recommended that allergens be removed by washing their bedding.

**High Positive**

**When test point is strongly colored**

It is very harmful to health because there is a considerable amount of allergen. Allergen removal is required through a high-strength laundry or cleaning company.

**Negative**

**When only control point is colored**

There's no house dust mites allergen. You don't have to worry.

**Invalid**

**When there is no color at any point**

The test is not performed normally. Retest is required.

※ The result after 30 minutes are unreliable.

### Caution

1. This product cannot be used for any purpose other than to detect house dust mite allergens.
2. Keep out of reach of children and infants.
3. Check the use-by date, damage or deterioration before using.
4. Conduct the test on a flat surface, and hold the buffer tube vertically and drop it slowly.
5. Results after 30 minutes are unreliable.
6. Look closely at the test cassette in a bright place.
7. People who have difficulty distinguishing colors or have low vision are difficult to check results.
